

Science communication

Mobilising knowledge for policy

The Prevention Centre is recognised nationally and internationally for its expertise in science communication for prevention. We use innovative techniques to translate research and share knowledge in ways that policy makers and practitioners will find useful and can act on.

Visit our website to access and download our full suite of free communication resources.

preventioncentre.org.au

The Chronicle
The Prevention Centre's monthly newsletter, featuring news, resources and events related to the prevention of chronic disease.

Prevention Works
A series of podcast conversations with some of our nation's top public health researchers on ways of addressing chronic disease.

Findings briefs
Summaries of key results and their relevant for policy and practice.

Knowledge syntheses
Combine evidence with policy experience and communications expertise to summarise the implications of research for the end user.

Factsheets
Identify and summarise key issues in the prevention of chronic disease.

Prevention Headlines

Updated daily, curating the key latest news on the prevention of chronic disease.

Media

Liaising with media to build profile for our network, projects and research.

Social media

Building scale for our research using our channels: [X](#), [LinkedIn](#) and [YouTube](#).

Events

Presentations and discussion from leading prevention researchers, policy makers and practitioners.

Adding value for researchers, policy makers and practitioners

Over the last decade, our approach to science communication has helped the successful knowledge translation of complex concepts to ensure research is policy-relevant and accessible for a wide range of end-users beyond academia. Our Science Communications team works with researchers, policy makers and practitioners in chronic disease prevention, all with unique communication goals and challenges, to translate evidence for different audiences. We also upskill the broader prevention research community in science communication through a Science Communications Community of Practice, which regularly brings together researchers with communication professionals to share best practice insights.
